

Managing hematological cancers: Peer-reviewed journal article featuring Fortrea oncologists

Managing hematological cancers in the 21st century is complex, focusing on personalized approaches and innovative therapies. Fortrea has supported clinical trials in this space for more than 30 years in more than 65 countries globally, and today has a global view on the management of these cancer patients, offering access to trials faster in partnership with our clients.

Fortrea supports our sponsors with a team of 50+ oncologists who employ a collaborative approach, which can result in co-authorship of peer-reviewed journal articles based on projects we've supported. In addition, they have contributed to industry knowledge via articles about their own academic and collaborative work.

2021.1

Summary: This paper presents a systematic review and meta-analysis examining mortality rates in adult patients with solid or hematological malignancies who were infected with SARS-CoV-2. It focuses specifically on lung and breast malignancies, analyzing how cancer type, treatment status, and patient characteristics influence outcomes. The study highlights the vulnerability of cancer patients to severe COVID-19 complications, emphasizing the need for tailored management strategies. By synthesizing data from multiple studies, the authors provide insights into risk factors and propose recommendations to improve care for this high-risk population.
