

The challenge

Clinical teams may face inefficiencies in their daily tasks and routine workflows due to:

- **Fragmented systems**
- **Time-consuming manual tasks**

To help support rapid trial execution and decision-making and transform everyday tasks into intelligent steps, Fortrea has created:

Digital Assistant

Business benefits

By helping turn knowledge into action, Digital Assistant:

- **Supports enterprise-wide efficiency** as it aims to transform how clinical teams interact with data and documents through a conversational interface
- **Can reduce operational friction** associated with searching for information across multiple systems and resources
- **Facilitates faster, smarter actions across the trial lifecycle** by connecting teams to the guidance they need

Learn how Digital Assistant empowers teams to work smarter, move faster and increase their focus on patients and outcomes.

The Fortrea solution

As an intelligent, AI-powered platform, Digital Assistant:

- **Empowers clinical teams with instant, secure information** through a chatbot
- **Aims to deliver quick, contextual, role-based insights**; for example, Clinical Research Associates (CRAs) can access specific protocol details and study-related standard operating procedures (SOPs) and receive trip report support for assigned studies
- **Uses intelligent version management**, powered by an advanced information model that dynamically manages document versions across studies, regions and sites—ensuring site-level accuracy for precise AI guidance
