

The challenge

Clinical trial oversight requires management of data to support detection of data anomalies and safety risks early, but study teams often encounter:

- **Reactive processes and manual reviews**
- **Fragmented systems and limited visibility**

These factors can hinder timely interventions, which may increase operational complexity and compliance risk.

Recognizing the need to improve data integrity and oversight, streamline decision-making and proactively manage trial quality, Fortrea has created:

Xcellerate[®] Central Monitoring

Business benefits

By evaluating data quality in near real-time,** Xcellerate[®] Central Monitoring:

- **Aims to reduce manual efforts** associated with traditional central monitoring
- **Helps teams improve data integrity and compliance** by providing live insights on inconsistencies or gaps
- **Promotes sufficient oversight and helps inform decision-making** during medical, statistical and data reviews
- **Helps to drive efficiency and build confidence** as teams are empowered to reduce the risk of errors

Learn how Xcellerate[®] Central Monitoring can transform operational oversight into proactive quality management.

The Fortrea solution

In this centralized monitoring solution, Xcellerate[®] Central Monitoring:

- **Delivers near real-time** insights and trend analysis capabilities** to highlight trial performance across sites and participants, utilizing defined critical data, cohorts and data domains
- **Can detect anomalies in clinical data**, for example, outlier site performance or participant data to support immediate review

**Real-time is dependent on data being directly integrated with Xcellerate[®] via API integrations.
